Subject: Improve Efficiency. Boost Productivity in your Government Fleet
Date: Wednesday, July 01, 2015 11:04:17 AM

Boost fleet productivity **WITH NETWORKFLEET.**

According to research by Frost & Sullivan, fleet operators that focus on achieving the benefits of fleet management, improve productivity by an average of 10 to 15 percent.

Networkfleet can help your government agency enhance driver accountability, route vehicles more efficiently and increase uptime, which leads to fewer headaches for you and increased productivity for your government fleet.

Make Drivers Accountable, Boost Productivity

When drivers know that you are aware of their whereabouts they often make more responsible decisions. With Networkfleet, you can monitor the location of your vehicles, helping keep drivers on the road where they can be productive and keep to your schedules. Plus, you can track vehicle start/stop and review system reports that provide the data you need to coach drivers to adopt more productive driving habits.

Route Vehicles More Efficiently

Improving routing, even by a small percentage, can increase the overall productivity of your government fleet. With Networkfleet's GPS fleet management capabilities, you can send your closest vehicle to a job—helping you accomplish more in the course of a day.

Keep Your Vehicles On The Road

It's hard for drivers to be productive when their vehicles are broken down. Networkfleet sends an alert when an onboard diagnostic code is triggered, helping keep your vehicles on the road where your drivers can be productive. You can also set proactive reminders for oil changes, tune-ups and other routine maintenance, plus track service records to help increase uptime.
